In Switzerland, these financial instruments are considered structured products. They are not collective investment schemes within the meaning of the Swiss Federal Act on Collective Investment Schemes (CISA), and are therefore not subject to the regulations of the CISA or the supervision of the Swiss Financial Market Supervisory Authority FINMA. The investors bear the Issuer's and the Guarantor's credit risk.

## Product Description

These products are characterised by unlimited participation in the performance of the Underlying. They also offer a – albeit only conditional – minimum redemption in the amount of the Strike Price (bonus level). However, this minimum redemption ceases to apply as soon as the Underlying touches the Barrier during Barrier Monitoring. The redemption at the end of the term is determined on the basis of the performance and final fixing of the Underlying: If the Underlying has not touched the Barrier during Barrier Monitoring, redemption is at the final fixing price, but at least the Strike Price. Nevertheless, if the Underlying has touched the Barrier during Barrier Monitoring, the Underlying is delivered or a cash compensation is paid (for details see "Redemption/delivery" or "Redemption formula").

### Prospects of Profit and Losses

Any possible gain results from the difference between the (lower) Issue Price and the (higher) final fixing price. The maximum gain is unlimited as a rule.

These products have only conditional repayment at the Strike Price multiplied by the specified Number of Underlyings defined by a Barrier: If the Underlying touches or breaches the Barrier during Barrier monitoring, the right of a guaranteed repayment at the Strike price multiplied by the specified Number of Underlyings ceases to apply immediately. Investors should be aware that this can happen during the relevant Barrier Monitoring (period of time or point(s) of time). Accordingly, the risks are considerable; given upwardly limited chances of gains, they correspond largely to the risks of a direct investment in the Underlying. The lower the closing price of the Underlying at maturity is, after falling below the Issue Price, the greater the losses sustained. In extreme cases (with a closing price of the Underlying of zero), the maximum loss can lead to a loss of the capital invested.

Even if the performance of the Underlying is positive and the Barrier is not touched, the price of the product during the term can be considerably below the Issue Price. Potential investors should bear in mind that price changes to the Underlying, as well as other influencing factors, may have a negative effect on the value of structured products.

#### Assumptions and limitations in preparing the market scenarios

The following market scenarios should afford the investor a simplified way of making an assessment of the significant factors that influence the investment performance of the certificate. For a precise analysis of the profit and loss scenarios, reference must be made to the formulas and definitions set out in this termsheet, (e.g. for "reimbursement"), because these scenarios have been deliberately simplified in order to make them better understandable. With the exception of those certificates for which one of the following factors is defined as the underlying (e.g. a currency certificate or a certificate of interest), the impact of these risk factors will be excluded from the simplified presentation of the scenario

- Foreign currency risks
- Interest rate risks
- Volatility risks
- Issuer risk
- Reference bond ("default or redemption event")
- Fees and costs both stemming from the certificate and for the acquisition and holding of the certificate

#### Market scenarios

Maximum gain:	Underlying performance
Maximum loss:	100%

##### POSITIVE SCENARIO

Indicative performance of the certificate:	0% to Underlying performance
Necessary market performance of Underlying:	- Barrier not reached and proportional participation in positive performance of the Underlying - OR: Barrier reached and subsequent price recovery of the relevant Underlying

##### BREAK EVEN

Indicative performance of the certificate:	0%
Necessary market performance of Underlying:	- Barrier reached and closing price of Underlying = Reference Price level at the time of the investment

##### NEGATIVE SCENARIO

Indicative performance of the certificate:	Loss of up to 100% possible
Necessary market performance of Underlying:	- Barrier reached and closing price of Underlying is lower than Reference Price level at the time of the investment

## Significant Risks for Investors

### Currency risks

If the Underlying or Underlyings is/are denominated in a currency other than the product's Reference Currency, investors should bear in mind that this may involve risks due to fluctuating exchange rates and that the risk of loss does not only depend on the performance of the Underlying(s) but also on any unfavourable performance of the other currency or currencies. This does not apply for currency-hedged products (quanto structure).

### Market risks

The general market performance of securities is dependent in particular on the development of the capital markets which, for their part, are influenced by the general global economic situation as well as by the economic and political framework conditions in the respective countries (so-called market risk). Changes to market prices such as interest rates, commodity prices or corresponding volatilities may have a negative effect on the valuation of the Underlying(s) or the Structured Product.

### Disruption risks

There is also the risk of market disruptions (such as trading or stock market interruptions or discontinuation of trading) or other unforeseeable occurrences concerning the respective Underlyings and/or their stock exchanges or markets taking place during the term or upon maturity of the Structured Products. Such occurrences can have an effect on the time of redemption and/or on the value of the Structured Products.

In the event of trading restrictions, sanctions and similar occurrences, the Issuer is entitled, for the purpose of calculating the value of the Structured Product, to include at its own discretion the Underlying instruments at their most recently traded price, at a fair value to be established at its sole discretion or indeed as worthless, and/or additionally to suspend pricing in the Structured Product or liquidate the Structured Product prematurely.

### Secondary market risks

Under normal market conditions, the Issuer or the Lead Manager intend to post bid- and ask-prices on a regular basis. However, neither the Issuer nor the Lead Manager is under any obligation with respect to investors to provide such bid- and ask-prices for specific order or securities volumes, and there is no guarantee of a specific liquidity or of a specific spread (i.e. the difference between bid- and ask-prices), for which reason investors cannot rely on being able to purchase or sell the Structured Products on a specific date or at a specific price.

### Issuer risk

The value of Structured Products may depend not only on the performance of the Underlying(s), but also on the creditworthiness of the Issuer and the Guarantor, which may change during the term of the Structured Product. The investor is exposed to the risk of default of the Issuer and the Guarantor. For further information on the rating of Bank Vontobel AG or Vontobel Holding AG, please see the Issuance Program.

### Risks associated with the Sustainability of the Product

A prospective investor should independently assess the information in relation to the sustainability of the Product and determine whether an investment in the product meets the investor's objectives and expectations or any investment guidelines applicable to the investor with respect to a sustainable investment. Vontobel Group (including the Issuer) makes no representation that the Product currently or in the future will meet the investor's objectives and expectations or any investment guidelines applicable to the investor with respect to a sustainable investment. In particular, the classification of a Product as "sustainable" may change during the life of the Product, for example when the Underlying of the Product no longer meets the sustainability requirements set. This is usually reviewed on a monthly basis. In case of a change, the classification of the Product on the website [www.derinet.com](http://www.derinet.com) will be updated.

### Risks relating to potential conflicts of interest

There may be conflicts of interest at the Vontobel Group companies that could have a negative impact on the value of the Structured Products. For example, Vontobel Group companies may enter into or participate in trading and hedging transactions relating to the Underlying. They may also perform other functions relating to the Structured Products (e.g. as Calculation Agent, Index Sponsor and/or Market Maker) which enable them to determine the composition of the Underlying or calculate its value. Vontobel Group companies may also receive non-public information relating to the Underlying. It should also be noted that the payment of distribution fees and other commissions to financial intermediaries could result in conflicts of interest to the detriment of the investor, as this could create an incentive for the financial intermediary to distribute products with a higher commission preferentially to its clients. As market maker, Vontobel Group companies can determine the price of Structured Products themselves to a large extent and determine it on the basis of various factors and earnings considerations.

Please also note the further, detailed description of potential conflicts of interest and their impact on the value of the Structured Products as contained in the Issuance Program.
